Quiz 8.

1. Location: Lower esophagus
2. Size: Starting from the lower part of mid esophagus to EGJ
3. Major findings: Mucosal break with erosion, hiatal hernia
4. Minor findings: Upper part of the stomach is migrated upward. More than 75% of the lower esophagus involve confluent mucosal break.
5. Impression: Hiatal hernia, Reflux esophagitis
6. Classification: LA(D)

Quiz 9.

1. Location: Mid esophagus
2. Size: ~4cm
3. Major findings: Flat discolored area
4. Minor findings: Red area, borders are well defined from normal mucosa. Area is brown with narrow band imaging
5. Impression: Superficial esophageal cancer
6. Classification: Type 0 – IIb, flat type

Quiz 10.

1. Location: Lower esophagus
2. Size: Diffuse
3. Major findings: Black spots
4. Minor findings: Circumferential black discoloration with dirty exudate
5. Impression: Acute esophageal necrosis (DD: blood from stomach bleeding?)
6. Classification:

Quiz 11.

1. Location: Mid body, Greater curvature
2. Size: Multiple: 3x2cm, 3cm
3. Major findings: Multiple cratered ulcers
4. Minor findings: Regenerating epithelium; slightly edematous margin; flat, brown base with white exudate; no fold change.
5. Impression: BGU (r/o lymphoma?)
6. Classification: H2

Quiz 12.

1. Location: Just below the angle (proximal antrum lesser curvature)

2. Size: 2x2 cm
3. Major findings: Flat elevated lesion
4. Minor findings: Ovoid, pale lesion. The center is flat, surrounded by nodular periphery. The lesion is well demarcated on the background of atrophic gastritis. After dye spraying, regular surface patterns of elevated lesions is shown.
5. Impression: Adenoma (r/o EGC, less likely)
6. Classification: IIa

Quiz 13.

1. Location: Epicenter of lesser curvature of gastric antrum.
2. Size: 4x4cm
3. Major findings: Mass
4. Minor findings: Mass with slight depression in the center and whitish exudate. Border between margin and normal mucosa can be ell discerned. No fold change.
5. Impression: AGC
6. Classification: Borrmann type 1

Quiz 14. (not very sure)

1. Location: Duodenal bulb
2. Size: 1.5cm
3. Major findings: White scar
4. Minor findings: A white scar is observed at the anterior wall?
5. Impression: Duodenal ulcer scar?
6. Classification: S2
